

Question and Answer 2016/17

Single Skating

N° 1

Question:

How do we call jump combinations and sequences that contain jumps that cannot be counted because of errors?

Answer:

By adding the word +Combo or +Seq before the jump with errors the computer will automatically add the * to any additional jumps not counted.

The sign * is automatically add by the computer if the performed jumps are not according to the rules or if the word Seq/Combo is placed before the jump abbreviation.

Example

Short Program

3T + stepout/fall +2T call 3T+Combo+2T*

Free Skating

3T + stepout/loss of rhythm + 2T call 3T+SEQ+2T*

3T+2T and 2T is the third time repeated call 3T+2T*
